

CoreDish™

Multiple Biopsy Containers Half Prefilled with 10% Formalin

Few recommendations concerning how the biopsies should be handled have been published. Performing a large number of biopsies means an increase in the number of containers handled and consequently a technical overload of the transmission network, which occurs without any financial counterpart. A new approach had to be developed in order to increase productivity. Thanks to the CoreDish™ it is no more necessary to use a multitude of individual containers, thereby reducing risks of confusion. The CoreDish™ is in the shape of a dish measuring only 15 x 95 mm and is half prefilled with 10% Neutral Buffered Formalin. The screw on lid incorporates an O-ring in order to make it leakproof and protect its contents. The CoreDish™ conforms to OSHA directives. An area for patient information is provided on the label.
